iii) Geology

(A) LOCATION 1:

The proposed location no. 1 is situated at about 8.5 km downstream of Stung Tasal Dam site having Latitude 11°41'9" N and Longitude 104°3'7" E. At this area, Hard and Jointed Quartzite rock is exposed on both the banks and river bed level all along the river.

The rock mass has three sets of joints. Joints are tightly healed, no opening was observed in joints. The rock exposures on both banks are covered by 1 to 1.5m thick loose overburden.

(B) LOCATION 2:

The proposed location no.2 is situated at about 1.3 km downstream of the location no 1 on Tasal river having Latitude 11°41'56" N and Longitude 104°3'9" E. At this site no rock outcrops are exposed.

However, at 20-30m downstream of the present axis some rock outcrops were exposed at right bank, no rock outcrop was seen on left bank and on river bed. At present Axis, both the banks are covered with thick overburden material. From site setting it is believed that the rock at river bed will be encountered at 5-6m below the present river bed.
